Flow-Cal's Client-Server System is LDCs' Choice

HOUSTON, TX – July 20, 2006

Flow-Cal, Inc. (www.flowcal.com), the industry leader in EFM data management software, reports that more and more Local Distribution Companies (LDCs) are utilizing Flow-Cal software to manage the flow of gas measurement data from field operations throughout their organizations. In recent months, Avista Corporation, AltaGas Holdings, and Delta Natural Gas Company have joined the ranks of Local Distribution Companies using Flow-Cal's Enterprise-based system for the power and flexibility it offers in accommodating their particular needs.

"Flow-Cal's open system architecture and flexibility have allowed us to streamline many internal processes, resulting in increased efficiencies in processing our flow data," says Greg Paulson, Metering Automation Engineer with Avista Corporation. Their selected Client-Server version provides a platform to which users can add optional Flow-Cal Enterprise modules in order to scale the system to their evolving needs.

"Our strategy of developing a universal measurement application for utilization by every sector of the value chain (production, gathering, pipeline and distribution) has been validated in recent years by unprecedented system sales from each of the four industry segments," adds Flow-Cal's President, Michael Squyres.

Flow-Cal's Client-Server and Enterprise systems enable larger, more complex operations better measurement data management by allowing them to work faster and smarter, and by linking the entire operation to one central system. Flow-Cal software offers advanced data validation and editing features that allow measurement personnel to more quickly and accurately process field data into custody transfer-quality data. Its data export and reporting capabilities link information to downstream production and/or financial accounting applications and users. It also offers the assurance of audit accountability and complete compliance with all industry standards.

Flow-Cal offers a full line of measurement software applications, from simple, inexpensive data editing and reporting programs for smaller gas companies to the most advanced software available for the largest international organizations.

About Flow-Cal, Inc.

Flow-Cal, Inc., a Houston-based software developer, is the industry-leader in measurement data management for natural gas and petroleum liquids. Flow-Cal's software is used by producers, gatherers, pipelines, and LDCs to validate, recalculate, store and report measurement data from field devices, and link information to users and stakeholders throughout an organization.
